PROJECT

Sep 2025 - Oct 2025

TECHNICAL SALES PERFORMANCE DASHBOARD

Personal project

Project Description:

- **Developed** an interactive **Tableau BI** solution to monitor sales performance and deliver data-driven insights for optimizing retail strategies.

Key Responsibilities:

- **Cleaned and modeled** relational datasets to ensure data accuracy.
- **Implemented** Action Filters and Dynamic Tooltips to enhance user experience and deep-dive exploration.

Github: https://github.com/ThienNguyen1412/TechnicalSale

Oct 2025 - Dec 2025

HOSPITAL PATIENT ANALYTICS

Personal project

Project Description:

- **Engineered** a comprehensive **Power BI** dashboard using multi-source healthcare data to monitor patient admissions, treatment costs, and hospital operations.

Key Responsibilities:

- **Designed** advanced Power BI visualizations with dynamic filters and drill-throughs for in-depth billing and medication analysis

- **Built** complex DAX measures to calculate key metrics, including total revenue and patient admission trends.

Github: https://github.com/ThienNguyen1412/HealthCare

Dec 2025 - Jan 2026

JOB SEARCHING WEBSITE

Personal project

Project Description:

- **Constructed** a job-seeking platform that optimizes data management and streamlines retrieval processes for Admins, Recruiters, and Candidates.

Key Responsibilities:

- **Analyzed** system requirements and designed architecture using UML diagrams.
- **Architected** and implemented relational databases via ERD to manage core entities and data integrity.
